PennMedicine.org/Abramson/BreastCME
The purpose of this educational activity is to bring together breast cancer specialists to highlight the state-of-the-art in multidisciplinary patient care. This activity will feature clinical updates in diagnosis and local, regional, and systemic therapies. Additionally, this activity will review promising clinical trials and clinical controversies in breast cancer management.

At the completion of this course, participants should be able to:

• Discuss clinical trial evidence that allows for the personalization of care in the management of early and advanced forms of breast cancer
• Assess current and evolving roles for prognostic and predictive biomarkers to stratify risk and inform clinical decision making in the management of breast cancer
• Examine recent clinical trial results concerning the use of novel breast cancer treatment strategies

This activity is directed toward medical, surgical, and radiation oncologists interested in the treatment of patients with breast cancer. Fellows, nurse practitioners, nurses, physician assistants, pharmacists, researchers, and other healthcare professionals interested in the treatment of breast cancer may also participate.
